

# The people impacts of NRM

A simple training package  
for building social and economic  
impact assessment into regional  
Natural Resource Management

## Acknowledgments

The National Action Plan for Salinity and Water Quality (NAPSWQ) is a joint Australian and Queensland Government initiative that encourages governments and regional communities to work together to address salinity and water quality issues in priority catchments throughout Queensland.

This document has been produced under the NAPSWQ using Australian and Queensland Government financial support.

The Action Plan provides a policy and funding base for addressing the biophysical, economic, and social aspects of natural resource management. NAPSWQ is the major source of funding for this impact assessment training package, through the Social and Economic State-level Investment Program, one of five research, development and extension programs conducted under a suite of state-level activities.
